

Fusion EasyBase Assembly

Important! Read the directions and study the pictures—it makes all the difference.

Matthew Burak

Everything you need to build your base is supplied.

4 table legs*

4 table aprons

4 corner blocks

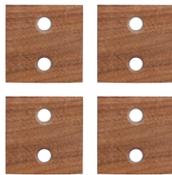

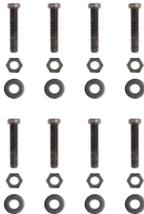

8 mounting bolts

8 nuts

8 washers

Allen (hex) wrench

No additional tools required!

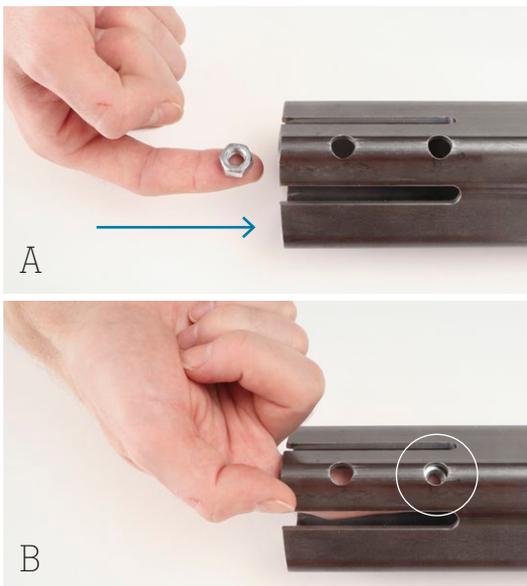

* Your legs and aprons may be a different size or style than shown in the photo—not to worry, the assembly is the same.

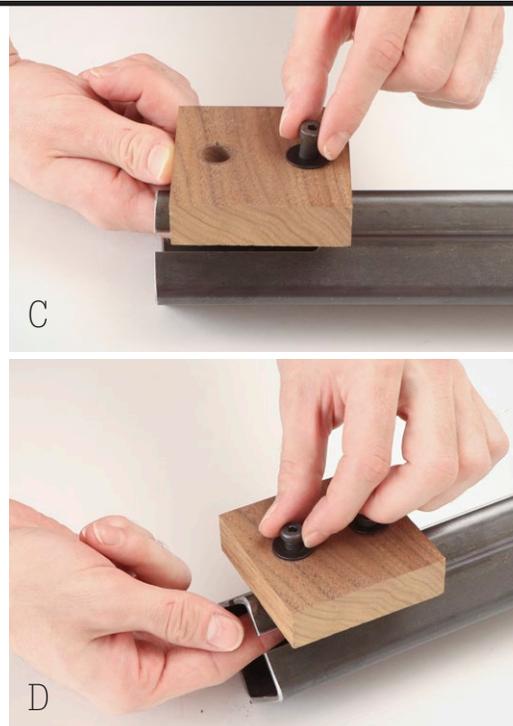

1: Loosely attach corner blocks to the legs.

A & B:
Position nut
behind the
lower hole
inside the leg.

*TIP: Having
trouble keeping
the nut in place
on your finger?
Wrap tape,
adhesive side
out, around
your fingertip!*

C & D:
Loosely
attach corner
block with
bolts and
washers.

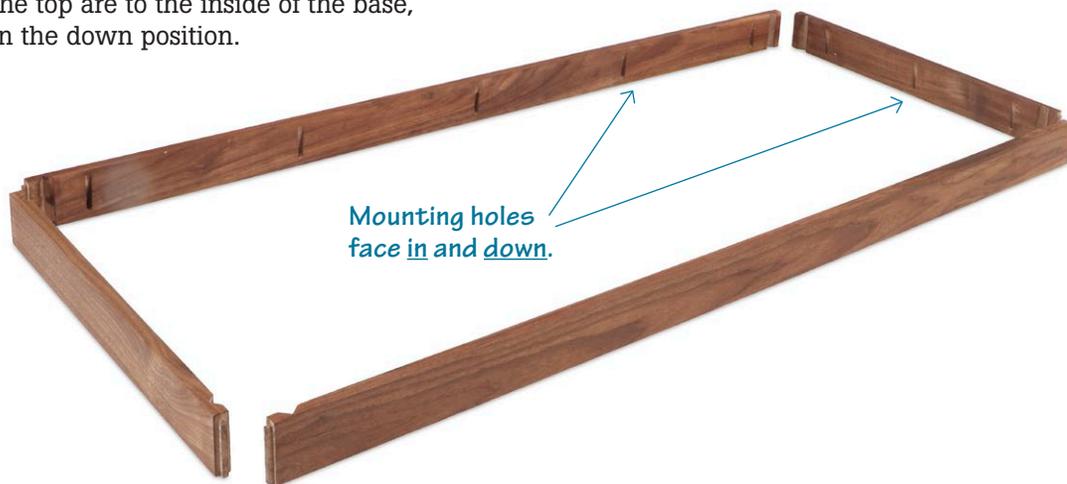

E: Do not tighten!
There should be a gap between
the legs and the corner blocks,
as shown.

2: Lay out the aprons.

Assemble your base upside down on a smooth, flat surface that is larger than the table base you're building.

Be sure the holes in the aprons for mounting the top are to the inside of the base, in the down position.

3: Install the legs.

Slide the notches at the top of the leg into the tabs on the apron—the corner blocks should fit into the notches on the aprons.

*Correct
alignment*

**You're
almost
done!**

4: Tighten the leg.

Using the supplied wrench, tighten each bolt until it stops turning and the wrench handle begins to spring back. Repeat steps 3 and 4 for the remaining legs.

5: Check the joinery.

Turn your table right-side up and carefully inspect the fit at each corner. If need be, fine-tune the fit by loosening the bolts and realigning the leg and aprons.

You're ready to mount your table top!

Check the fit at each corner.
